

Robert Kulp

Dear Hiring Manager,

I'm sure you have sifted through many resumes by now, even so I ask you to look closer at me. Please take a look at my website at www.rabithole.com. As you are doing this, keep in mind I am a seasoned employee having had a previous career as an automotive technician. You might wonder what I learned as an auto tech that could help me as a developer.

Hands down the most valuable skill I learned was how to solve problems in creative ways. Personally I am always saddened by how few understand the value in this skill and how intensive the diagnosis of modern cars can be. While I was not writing software, I was working with electromechanical systems controlled by computers, which takes years of experience to master.

A close second to creative problem solving would be people skills. This applies both to customer service skills and working together as a team to tackle complex projects. Both require patience and creative problem solving specific to who I am working with.

In addition to what I learned as an automotive technician, my inherent personality is highly self motivated and goal oriented. My leisure activities demonstrate my resolve as surfing, mountain biking and music all require a great deal of perseverance to become accomplished at each activity. Each of these activities requires years of commitment that I bring to my new career.

Hiring me is hiring a dedicated employee who lives a healthy lifestyle and brings a positive attitude to the work place. I hope I have convinced you I am worth a closer look with a personal interview.

Sincerely,

Profile

I am an aspiring Jr. Web Developer looking for an outgoing team that is enthusiastic about what they do. The past three years I have been applying what I learn in school to real world projects to prepare myself for the work place. My personal website is an ongoing process intended to demonstrate my skills listed below, and more will be added in time as I am regularly and daily building upon my skills and experience.

Presently I am focused on learning JavaScript and its related technologies. I lack experience and I am looking to get my foot in the door of an agile development environment. Work for me does not end outside of the workplace and I spend much of my time outside of work continuing my education to facilitate the company I work for.

Skill Set

- Problem solver
- HTML5 and CSS3
- JavaScript
- Bootstrap
- jQuery.
- Google Analytics
- Chrome Developer Tools
- SEO standards
